# Andhra Pradesh: Water shortage hits Srisailam hydel station power output

*A total of 90.91 TMC was released through various irrigation canals on the right and left banks to meet the water requirements of both States.*

KURNOOL: Despite having adequate manpower, sophisticated machinery and well-maintained units, the Srisailam Right Bank Hydro-Electric Station (SRBHES) in Andhra Pradesh is experiencing one of its worst years in power generation due to inadequate water storage in the reservoir.

The power station has an installed capacity of 770 megawatts (MW) with seven units, each capable of generating 110 MW. The hydro-electric power station has generated just 73.26 million units (MU) of electricity by utilising 11.132 TMC of water against its target of 1,100 MU this year.
